

Guide Cylinders

Linear Transfer Unit

Integration of a basic cylinder and guide rods

Series MGG/MGC

Guide Cylinders

Series **MGG**

Guide cylinder

Series **MGG**

Basic cylinder with integrated guide rods in a compact configuration

- Long strokes available
- Shock absorbers are standard.

P. 24

(End lock type)

Guide cylinder / End lock type

Series **MGG**

Allows holding of cylinder position even when air supply is cut off.

- Moving parts are locked and held in place when air is discharged at the stroke end positions.

Guide cylinder / Compact type

Series **MGC**

Compact type of Series MGG

- Compact guide body and front plate

Guide Cylinder *Series MGG*

ø20, ø25, ø32, ø40, ø50, ø63, ø80, ø100

Integration of a basic cylinder and guide rods
Linear Transfer Unit

Basic cylinder with integrated guide rods A linear transfer unit that achieves high lateral load

Guide Cylinder
ø20, ø25, ø32, ø40,

Two types of guide rod bearings

Slide bearing Excellent wear resistance and heavy load capacity
Ball bushing bearing High precision and smooth operation

Compact auto switches can be mounted.

Cylinder position can be detected.

All models have built-in magnets for auto switches.
Auto switch capable throughout entire stroke range.

Application Example

Non-rotating accuracy improved by using two guide rods

Bore size (mm)	20	25	32	40	50	63	80	100
Slide bearing	±0.07°	±0.06°	±0.06°	±0.05°	±0.04°	±0.04°	±0.04°	±0.03°
Ball bushing bearing	±0.06°	±0.05°	±0.04°	±0.04°	±0.04°	±0.03°	±0.03°	±0.02°

When the cylinder is retracted (initial value), with no load or without deflection of the guide rod, the non-rotating accuracy shall be the value in the table or less.

A grease port is provided as standard.

This allows lubrication of the bearings.

in a compact configuration
resistance and non-rotating precision

Series MGG

ø50, ø63, ø80, ø100

End lock option introduced to allow holding of cylinder position even when air supply is cut off.

Moving parts are locked and held in place when air is discharged at the stroke end positions.

Shock absorbers and adjusting bolts are standard.

Stroke end shock absorption for high speed operation and fine stroke adjustment are possible.

Simple adjustment of extension stroke

The extension stroke can be adjusted by moving the rear plate.

Four mounting styles

A full range of made-to-order specifications

- Компактная конструкция, объединяющая стандартный цилиндр CG1 и направляющие
- Тип направляющей: скольжения или качения
- Высокая устойчивость к боковым нагрузкам
- Защита от проворота
- В стандартном исполнении с магнитным кольцом
- Встроенный амортизатор
- Регулировка выдвижения штока

Меры предосторожности

Герконовые выключатели

Монтаж

- Несмотря на то, что герконовые выключатели могут выдерживать ударные нагрузки до 30 G, следует избегать ударов и механических повреждений.
- Не используйте датчики положения в зоне сильных магнитных полей, что позволит избежать ошибочных включений.
- В случаях, когда смонтированы несколько цилиндров с датчиками положения параллельно друг другу, расстояние от одной гильзы цилиндра до другой должно быть не менее 40 мм.
- Соединительный кабель не должен подвергаться растягивающим нагрузкам. Не подвергайте кабель длительным изгибающим нагрузкам.
- Несмотря на то, что датчики положения выполняют требования по степени защиты IP67, они, по возможности, не должны подвергаться воздействию воды, масла, охлаждающей жидкости и т.д.

Подключение датчиков положения

- Электрическая нагрузка не должна превышать допустимых значений по току и напряжению.
- Полностью произведите электрический монтаж схемы датчика положения, прежде чем он будет подключен к источнику тока.
- У датчиков сигналов с индикатором рабочего состояния следует учитывать полярность. Красный кабель подключайте к плюсу, черный - к минусу. При неправильном подключении датчик сигналов включается, однако ' индикатор рабочего состояния не горит.
- Если у датчиков положения с индикатором рабочего состояния не обеспечен мин. ток, то он функционирует, но при этом индикатор рабочего состояния горит тусклым светом или не горит вовсе.
- При последовательном включении датчиков положения значения падения напряжений суммируются, что обусловлено сопротивлением светодиодов.
- Если напряжение питания недостаточно, внутреннее падение напряжения на светодиоде может привести к неправильному действию нагрузки.
- В случае, когда внутреннее падение напряжения светодиода влечет за собой проблемы, следует предпочесть датчик положения без индикатора рабочего состояния (D-C80 или D-A80).

* Solid state switches marked with "○" are produced upon receipt of order.
* D-A9□, M9□, M9□W, and D-M9BA cannot be mounted.

* Since there are other applicable auto switches than listed, refer to page 36 for details.
* For details about auto switches with pre-wired connector, refer to SMC's "Best Pneumatics" catalogue.
* D-A9□, M9□, M9□W are shipped together (but not assembled).
(Only switch mounting bracket is assembled at the time of shipment.)

Caution

When using auto switches shown inside (), stroke end detection may not be possible depending on the one-touch fitting or speed controller model. Please contact SMC in this case.

Model / Specifications

Standard Stroke

Model (Bearing type)	Bore size (mm)	Standard stroke (mm)	Long stroke (mm)
MGM (Slide bearing) MGL (Ball bushing bearing)	20	75, 100, 125, 150, 200	250, 300, 350, 400
	25	75, 100, 125, 150, 200, 250, 300	350, 400, 450, 500
	32		350, 400, 450, 500, 600
	40		350, 400, 450, 500, 600, 700, 800
	50		350, 400, 450, 500, 600, 700, 800, 900, 1000
	63		350, 400, 450, 500, 600, 700, 800, 900, 1000, 1100
	80		350, 400, 450, 500, 600, 700, 800, 900, 1000, 1100, 1200
	100		350, 400, 450, 500, 600, 700, 800, 900, 1000, 1100, 1200, 1300

* Intermediate strokes and short strokes other than the above are produced upon receipt of order.

Specifications

Model		MGG□□20	MGG□□25	MGG□□32	MGG□□40	MGG□□50	MGG□□63	MGG□□80	MGG□□100		
Basic cylinder		CDBG1BN	Bore size	Port thread	Stroke	Lock position	Manual release	-	Auto switch	-	XC70
Bore size (mm)		20	25	32	40	50	63	80	100		
Action		Double acting									
Fluid		Air									
Proof pressure		1.5 MPa									
Maximum operating pressure		1.0 MPa									
Minimum operating pressure		0.15 MPa (Horizontal with no load)									
Ambient and fluid temperature		-10 to 60°C									
Piston speed		50 to 1000 mm/s							50 to 700 mm/s		
Cushion	Basic cylinder	Rubber bumper									
	Guide unit	Built-in shock absorbers (2 pcs.)									
Stroke adjusting range (One side) [Built-in adjusting bolts (2 pcs.)]		0 to -10 mm	0 to -15 mm								
Base cylinder lubrication		Non-lube									
Thread tolerance		JIS Class 2									
Stroke length tolerance		$+1.9$ $+0.2$ mm (1000 st or less), $+2.3$ $+0.2$ mm (1001 st or more)									
Non-rotating accuracy*	Slide bearing	±0.07°	±0.06°	±0.06°	±0.05°	±0.04°	±0.04°	±0.04°	±0.03°		
	Ball bushing bearing	±0.06°	±0.05°	±0.04°	±0.04°	±0.04°	±0.03°	±0.03°	±0.02°		
Piping port size (Rc, NPT, G)		1/8				1/4		3/8	1/2		

* When the cylinder is retracted (initial value), with no load or without deflection of the guide rod, the non-rotating accuracy shall be the value in the table or less.

Lock Specifications

Bore size (mm)	20	25	32	40	50	63	80	100
Holding force (Max.) (N)	215	330	550	860	1340	2140	3450	5390
Lock position	Head end, Rod end							
Backlash	2 mm or less							
Manual release	Non-lock type, Lock type							

* Adjust switch positions for operation at both the stroke end and backlash (2 mm) movement positions.

Shock Absorber Specifications

Shock absorber model	RB1007	RB1412	RB2015	RB2725
Applicable guide cylinder	MGG□□20	MGG□□25, 32	MGG□□40, 50, 63	MGG□□80, 100
Maximum energy absorption (J)	5.88	19.6	58.8	147
Stroke absorption (mm)	7	12	15	25
Maximum collision speed (m/s)	5			
Max. operating frequency (cycle/min*)	70	45	25	10
Ambient temperature range (°C)	-10 to 80			
Spring force (N)	Extended	4.22	6.86	8.34
	Retracted	6.86	15.98	20.5

* It denotes the values at the maximum energy absorption per cycle. Therefore, the operating frequency can be increased according to the energy absorption.

Theoretical Output

Unit: N

Bore size (mm)	Rod size (mm)	Operating direction	Piston area (mm ²)	Operating pressure (MPa)

Note) Theoretical output (N) = Pressure (MPa) x Piston area (mm²)

Weight

Bore size (mm)			20	25	32	40	50	63	80	100
Basic weight	LB type (Ball bushing bearing / Basic)		1.72	2.82	3.84	7.19	11.63	16.6	26.32	37.46
	LF type (Ball bushing bearing / Front mounting flange)		2.44	3.79	4.87	9.38	14.17	20.58	33	45.98
	MB type (Slide bearing / Basic)		1.71	2.79	3.36	7.17	11.36	16.22	25.61	36.36
	MF type (Slide bearing / Front mounting flange)		2.42	3.75	4.39	9.37	13.89	20.2	32.29	44.89
Additional weight per each 50 mm of stroke			0.14	0.17	0.25	0.4	0.61	0.82	1.11	1.48
Additional weight for long stroke			0.01	0.01	0.02	0.03	0.06	0.1	0.19	0.26
Additional weight with bracket			0.011	0.018	0.019	0.031	0.061	0.269	0.384	0.548
Additional weight of lock unit	Head end lock (H)	Non-lock type (N)	0.05	0.07	0.08	0.17	0.26	0.44	0.8	1.15
		Lock type (L)	0.07	0.08	0.1	0.21	0.3	0.48	0.88	1.23
	Rod end lock (R)	Non-lock type (N)	0.07	0.08	0.12	0.19	0.31	0.51	0.9	1.31
		Lock type (L)	0.09	0.1	0.14	0.23	0.34	0.54	0.97	1.39

Calculation: (Example) **MGGLB32-500-HN**
 (Ball bushing bearing / Basic, ø32/500 st., with bracket)
 • Basic weight 3.84 (LB type)
 • Additional stroke weight 0.25/50 st
 3.84 + 0.25 x 500/50 + 0.02 + 0.019 + 0.08 = 6.459 kg

- Stroke 500 st
- Additional weight for long stroke 0.02
- Additional weight with bracket 0.019
- Additional weight of lock unit 0.08 (Head end, Non-lock type)

Moving Parts Weight

Bore size (mm)	20	25	32	40	50	63	80	100
Moving parts basic weight	0.69	1.14	1.61	3.09	5.23	8.29	13.09	18.58
Additional weight per each 50 mm of stroke	0.109	0.135	0.203	0.326	0.509	0.679	0.948	1.265

Calculating weight of moving parts (Example) **MGGLB32-500-HN**
 • Moving parts basic weight 1.61
 • Additional stroke weight 0.203/50 st
 • Stroke 500 st
 1.61 + 0.203 x 500/50 = 3.64 kg

Refer to pages 8 to 16 for the allowable end load and deflection, as well as the allowable eccentric load.

Made to Order
 (For details, refer to page 71.)

Symbol	Specifications
XC79	Additional machining of tapped hole, drilled hole or pinned hole

Construction

MGG□□

ø20 to ø100

Manual release (Lock type)

Manual release (Non-lock type)

With rod end locking (Base cylinder only)

* Since the guide unit figure is the same as the standard type, refer to page 17 through to 19.

Component Parts

No.	Description	Material	Note
1	Rod cover	Aluminum alloy	White hard anodized
2	Tube cover	Aluminum alloy	White hard anodized
3	Piston	Aluminum alloy	Chromated
4	Piston rod	Carbon steel	Hard chrome plated ø20, ø25 are stainless steel
5	Bushing	Bearing alloy	
6	Bumper A	Urethane	Description is "Bumper" for ø63 and larger
7	Bumper B	Urethane	ø40 and larger are the same as Bumper A.
8	Magnet	—	
9	Snap ring	Stainless steel	Not required for ø80, ø100
10	Wear ring	Resin	
11	Rod end nut	Roller steel	Nickel plated ø100 is carbon steel
12	Piston gasket	NBR	
13	Head cover	Aluminum alloy	White hard anodized For head side locking type and long stroke
14	Cylinder tube	Aluminum alloy	Hard anodized
15	Lock piston	Carbon steel	Hard chrome plated, Heat treated
16	Lock bushing	Bearing alloy	
17	Lock spring	Stainless steel	
18	Bumper	Urethane	
19	Hexagon socket head cap screw	Chromium molybdenum steel	Black zinc chromated
20	Cap A	Aluminum die-casted	Black painted For non-lock type
21	Cap B	Carbon steel	Oxide film treated For lock type
22	Rubber cap	Synthetic rubber	For non-lock type
23	M/O knob	Zinc die-casted	Black painted For lock type
24	M/O bolt	Chromium molybdenum steel	Black zinc chromated, Red painted For lock type
25	M/O spring	Steel wire	Zinc chromated For lock type ø20, ø25, ø32 are stainless steel

Component Parts

No.	Description	Material	Note
26	Stopper ring	Carbon steel	Zinc chromated For lock type
27	Piston holder	Urethane	Used for ø40 and larger
28	Seal retainer	Roller steel	Used for ø80 and ø100
29	Rod seal	NBR	
30	Piston seal	NBR	
31	Tube gasket	NBR	
32	Lock piston seal	NBR	

* Since the guide unit parts are the same as the standard type, refer to page 17 through to 19.

Replacement Parts: Seal Kit

Bore size (mm)	Kit no.	Contents
20	CBG1N20-PS	Set of nos. above ②⑨, ③①, ③②.
25	CBG1N25-PS	
32	CBG1N32-PS	
40	CBG1N40-PS	

* Seal kit includes ②⑨ to ③②. Order the seal kit, based upon the bore size.

Caution

Basic cylinders with ø50 or larger bore sizes cannot be disassembled.
(Cylinders with ø50 or larger bore sizes are tightened with a large tightening torque and cannot be disassembled. Please contact SMC when disassembly is required.)

Note) Two types of brackets are used as a set.

[Mounting screws set made of stainless steel]

The following set of mounting screws made of stainless steel are also available. Use it in accordance with the operating environment. (Please order the switch mounting bracket separately, since it is not included.)

BBA3: For D-B5, B6, G5, K5 type

BBA4: For D-C7, C8, H7 type

"D-H7BAL/G5BAL" switch is set on the cylinder with the stainless steel screws above when shipped.

When only a switch is shipped independently, "BBA3" or "BBA4" screws are attached.

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.
For detailed specifications, refer to SMC's "Best Pneumatics" catalogue, etc.

Type	Model	Electrical entry (Direction)	Features	Applicable bore size
Reed switch	D-C73, C76, B73, B73C, B76	Grommet (in-line)	—	ø20 to ø63
	D-C80, B80C		Without indicator light	
	D-B53		—	ø20 to ø100
Solid state switch	D-H7A1, H7A2, H7B, G79, K79, K79C		—	ø20 to ø63
	D-H7NW, H7PW, H7BW		Diagnostic indication (2-colour indication)	
	D-G5NTL		With timer	ø20 to ø100

* With pre-wired connector is available for solid state auto switches. For details, refer to SMC's "Best Pneumatics" catalogue.

* Normally closed (NC = b contact), solid state switches (D-F9G, F9H type) are also available. For details, refer to SMC's "Best Pneumatics" catalogue.

* Wide range detection type, solid state auto switch (D-G5NBL type) is also available. For details, refer to SMC's "Best Pneumatics" catalogue.

Series MGG

Specific Product Precautions 1

Be sure to read this before handling. For Safety Instructions, Actuators Common Precautions, refer to “Precautions for Handling Pneumatic Devices” (M-03-E3A).

Mounting and Adjustment

⚠ Warning

1. Installing a protective cover

During mounting, handling and operation, the rear plate makes reciprocating movements. Therefore, pay careful attention not to insert your hand, etc., between the cylinder and the rear plate.

When you are going to fit this product to the outside of your equipment, take preventative measures such as installing a protective cover.

Protective cover installation example

Caution on Handling the Shock Absorber

⚠ Caution

1. For details, make sure to refer to “Shock Absorber (RB series)” in SMC’s “Best Pneumatics” catalogue.

⚠ Caution

1. Use caution not to scratch or dent the sliding part of the guide rod.

Because the outer circumference of the guide rod is manufactured with precise tolerances, even a slight deformation, scratch, or gouge can lead to faulty operation or reduced durability.

2. When fitting the guide body, use the guide body with a fitting surface that has a high level of flatness.

If the guide rod has twisted, operation resistance will become abnormally higher and the bearing will wear at an early stage, thereby resulting in poor performance.

3. Allow an ample space around the cylinder.

Ensure enough clearance around the cylinder to allow for unobstructed maintenance and inspection work.

4. Extension stroke adjustment

To adjust the extension stroke by moving the rear plate, loosen the hexagon socket head screws on the left and right sides of the plate, move the rear plate to the desired stroke position in proximity to the guide body, and retighten the hexagon socket head screws on the left and right.

5. Lubrication

To prevent foreign particles from mixing with the grease, use a grease applicator that has a check valve. Use a high-quality lithium soap-based no. 2 grease.

6. Mounting orientation

For ceiling mount (opening of the rear plate face downwards), the base cylinder head end and the rear plate may interfere due to the deflection of the guide rod.

Series MGG

Specific Product Precautions 2

Be sure to read this before handling. For Safety Instructions, Actuators Common Precautions, refer to "Precautions for Handling Pneumatic Devices" (M-03-E3A).

With End Lock Type

Use the Recommended Pneumatic Circuit

⚠ Caution

- This is necessary for proper operation and release of the lock.

Operating Precautions

⚠ Caution

- Do not use 3 position solenoid valves.**
Avoid use in combination with 3 position solenoid valves (especially closed center metal seal types). If pressure is trapped in the port on the lock mechanism side, the cylinder cannot be locked. Furthermore, even after being locked, the lock may be released after some time, due to air leaking from the solenoid valve and entering the cylinder.
- Back pressure is required when releasing the lock.**
Before starting operation, be sure to control the system so that air is supplied to the side without the lock mechanism as shown in the figure above. There is a possibility that the lock may not be released. (→ Refer to the section on releasing the lock.)
- Release the lock when mounting or adjusting the cylinder.**
If mounting or other work is performed when the cylinder is locked, the lock unit may be damaged.
- Operate with a load ratio of 50% or less.**
If the load ratio exceeds 50%, this may cause problems such as failure of the lock to release, or damage to the lock unit.
- Do not operate multiple cylinders in synchronisation.**
Avoid applications in which two or more end lock cylinders are synchronised to move one workpiece, as one of the cylinder locks may not be able to release when required.
- Use a speed controller with meter-out control.**
The lock may not be released occasionally with meter-in control.
- Be sure to operate completely to the cylinder stroke end on the side with the lock.**
If the cylinder piston does not reach the end of the stroke, locking and unlocking may not be possible. Therefore, do not adjust the stroke with the adjustment bolts or shock absorbers.
- Do not use an air cylinder as an air-hydro cylinder. This will cause leakage of hydraulic fluid.**
- Adjust an auto switch's position so that it operates for movement to both the stroke end and backlash (2 mm) positions.**
When a 2-colour indication switch is adjusted for green indication at the stroke end, it may change to red for the backlash return, but this is not abnormal.

⚠ Warning

- Operate within the specified cylinder speed.**
Otherwise, cylinder and seal damage may occur.

Operating Pressure

⚠ Caution

- Use air pressure of at least 0.15 MPa for the port on the lock mechanism side. This is necessary to release the lock.

Exhaust Speed

⚠ Caution

- Locking will occur automatically if the pressure applied to the port on the lock mechanism side falls to 0.05 MPa or less. In cases where the piping on the lock mechanism side is long and thin, or the speed controller is separated by some distance from the cylinder port, the exhaust speed will be reduced. Take note that some time may be required for the lock to engage. In addition, clogging of a silencer mounted on the solenoid valve exhaust port can produce the same effect.

Releasing the Lock

⚠ Warning

- Before releasing the lock, be sure to supply air to the side without the lock mechanism, so that there is no load applied to the lock mechanism when it is released. (Refer to the recommended pneumatic circuits.) If the lock is released when the port on the other side is in an exhaust state, and with a load applied to the lock unit, the lock unit may be subjected to an excessive force and be damaged. Furthermore, sudden movement of the piston rod is very dangerous.

Manual Release

⚠ Caution

- Manual release (Non-lock type)**
Insert the accessory bolt from the top of the rubber cap (it is not necessary to remove the rubber cap), and after screwing it into the lock piston, pull it to release the lock. If you stop pulling the bolt, the lock will return to an operational state.
Thread sizes, pulling forces and strokes are as shown below.

Bore size (mm)	Thread size	Pulling force (N)	Stroke (mm)
20, 25, 32	M2.5 x 25 ℓ or more	4.9	2
40, 50, 63	M3 x 30 ℓ or more	10	3
80, 100	M5 x 40 ℓ or more	24.5	3

Remove the bolt for normal operation.
It can cause lock malfunction or faulty release.

- Manual release, Lock type**

While pushing the M/O knob, turn it 90° counterclockwise. The lock is released (and remains in a released state) by aligning the ▲ mark on the cap with the ▼ OFF mark on the M/O knob.
When locking is desired, turn M/O button clockwise 90° while pushing fully, correspond ▲ on cap and ▼ ON mark on M/O button. The correct position is confirmed by a "click" sound. If not confirmed, locking is not function.
