

## Ионизирующая камера, серия ZVB

Устройство предназначено удаления пыли с поверхности изделий, помещаемых в камеру.

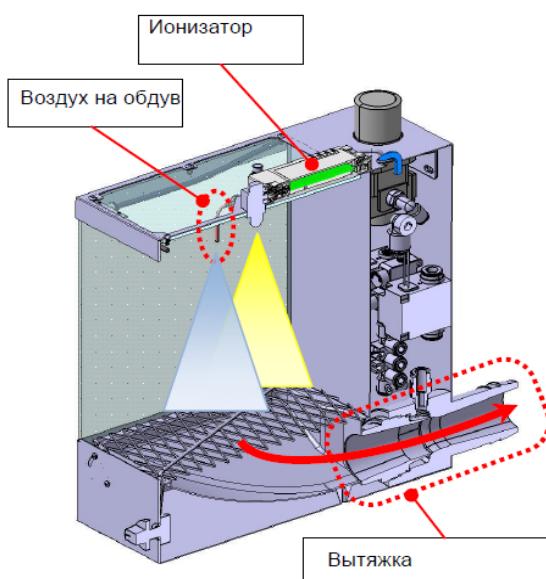

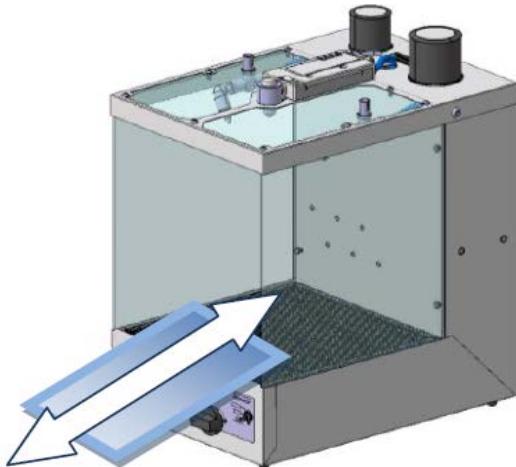

Применение: (1) Удаление и сбор пыли с печатных плат/микросхем в процессе сборки.

(2) Удаление пыли с изделий перед их упаковкой.

- **Удаление пыли (Ионизация и обдув воздухом)**

\*Удаляет пыль с помощью ионизации и предотвращает повторное попадание пыли после удаления.

\*Периодическое сдувание эффективно удаляет пыль.

- **Автоматическая работа (Оптоэлектрический датчик)**

Определяет наличие детали в камере и начинает удаление пыли. Возможность контроля времени работы нейтрализатора.

- **Удаление пыли (Вытяжка)**

\* Втягивает пыль. Предотвращает повторное попадание удаленной пыли.

\*Без подвижных деталей.  
Больший срок службы.

\*Дополнительные комплектующие:  
мешок/рукав для сбора пыли.

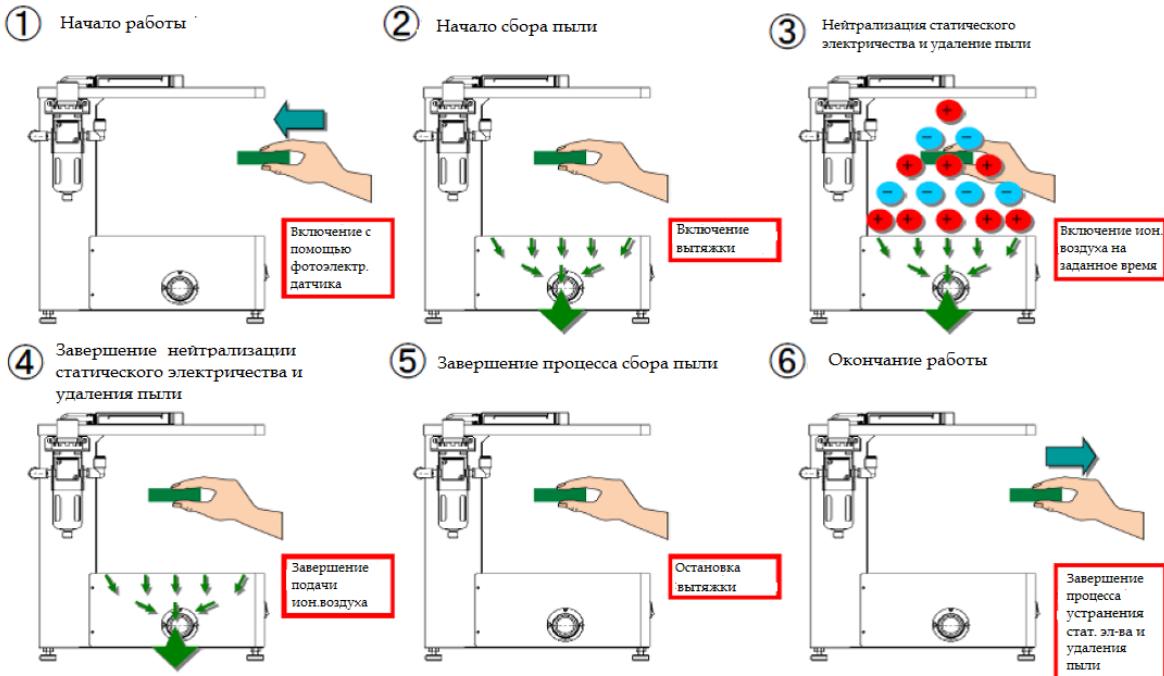

- **Комбинированная конструкция**

Ионизирующее оборудование, обдув и вытяжка объединены в одном устройстве.

- **Управление с помощью внешнего сигнала**

Внешние входы/выходы

## ❖ Этапы работы

## ❖ Код для заказа

ZVB 20 – B S A – D

Фотоэлектрический датчик	
S	Прим. 1) Фотоэлектрич. датчик

● Опция

D	Выхлопной рукав 3 м (рукав поставляется в комплекте)
P	Мешок для сбора пыли (рукав поставляется в комплекте)
S	Ограничитель расхода для доп. контура обдува

● Блок питания

A	Отсутствует. Прим. 2)
A	Имеется. Прим. 3)

Прим. 1) В этом случае сигнал на включение камеры от внешнего тумблера подается на клеммную колодку на задней панели устройства.

Прим. 2) В комплекте только кабель с вилкой по японскому стандарту.

Прим. 3) Кабель блока питания с вилкой по японскому стандарту.

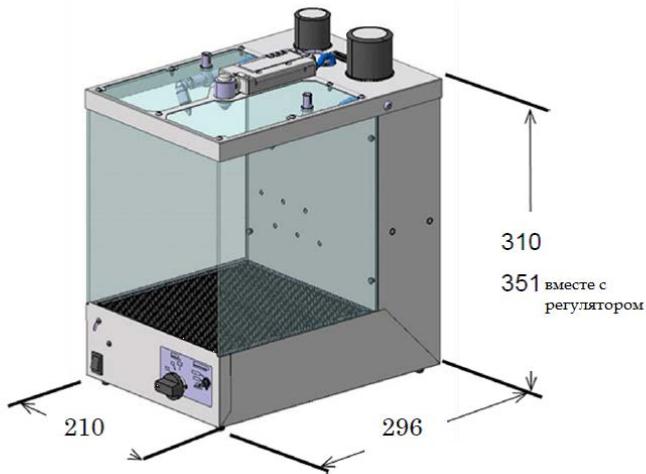

## ❖ Технические характеристики

Способ нейтрализации статического электричества	Коронный разряд (высокочастотный переменный ток)
Среда	Сжатый воздух (очищенный сухой)
Рабочее давление	0,2 ~ 0,7 МПа
Время устранения статического электричества	1 с или менее (Примечание 1)
Ионный баланс	±15 В (Примечание 1)
Температура рабочей и окружающей среды	-5 ~ 60 °C (без замерзания)
Напряжение	AC85 ~ 264 В 50/60 Гц (при использовании собственного блока питания)
Импульсы подачи воздуха на обдув	50 мс, 100 мс, постоянный обдув
Время работы	1 с, 5 с, 10 с, постоянно
Потребление воздуха	340 нл/мин
Встроенные клапаны и устройства	Ионизатор: Клапан, Регулятор (не требует настройки) (Примечание 2) Дополнительный контур обдува: Клапан, Регулятор, Дроссельная шайба (Примечание 2) Пылесборник: Клапан, Регулятор
Вес	5,1 кг

*Примечание 1:* Время, которое потребуется для нейтрализации статики с 1000 В до 100 В основано на данных испытаний с заряженной пластиной (размер: 150 мм x 150 мм, емкость: 20 пФ), расположенной на высоте 100 мм как указано в Американском стандарте ANSI (ANSI/ESD, STM3, 1-2000)

*Примечание 2:* Дроссельная шайба для дополнительного контура обдува поставляется как опция (см. «S» в коде для заказа).

## ❖ Размеры (мм)

# Desktop Duster Box

**Integration of the static neutralisation, dust removal and dust collection processes into one box!**

**3 functions in 1 unit!**

**All in one**

Blow nozzle with improved dust removal efficiency

Dust removal

Static neutralisation

Adaptation of a dedicated ionizer with improved static neutralisation efficiency.

Dust collection

Pneumatic dust collector enables quick dust collection response.

**A4 size [ZVB20]**

210 x 297 mm (Dimensions)  
202 x 212 mm (Static neutralisation space)

**A3 size [ZVB40]**

400 x 384 mm (Dimensions)  
392 x 298 mm (Static neutralisation space)

**Series ZVB**

Static neutralisation

Dust removal

Dust collection

3 functions in 1 unit! All in one

Static neutralisation and dust removal efficiency improved with a separate ion blow and air blow structure!

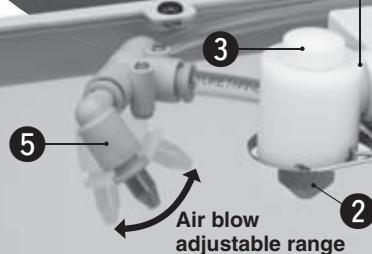

## Ionizer

Offset voltage:  $\pm 10\text{ V}$

\* Static neutralisation distance: 100 mm

Discharge time: 0.3 s

\* 1000 V → 100 V

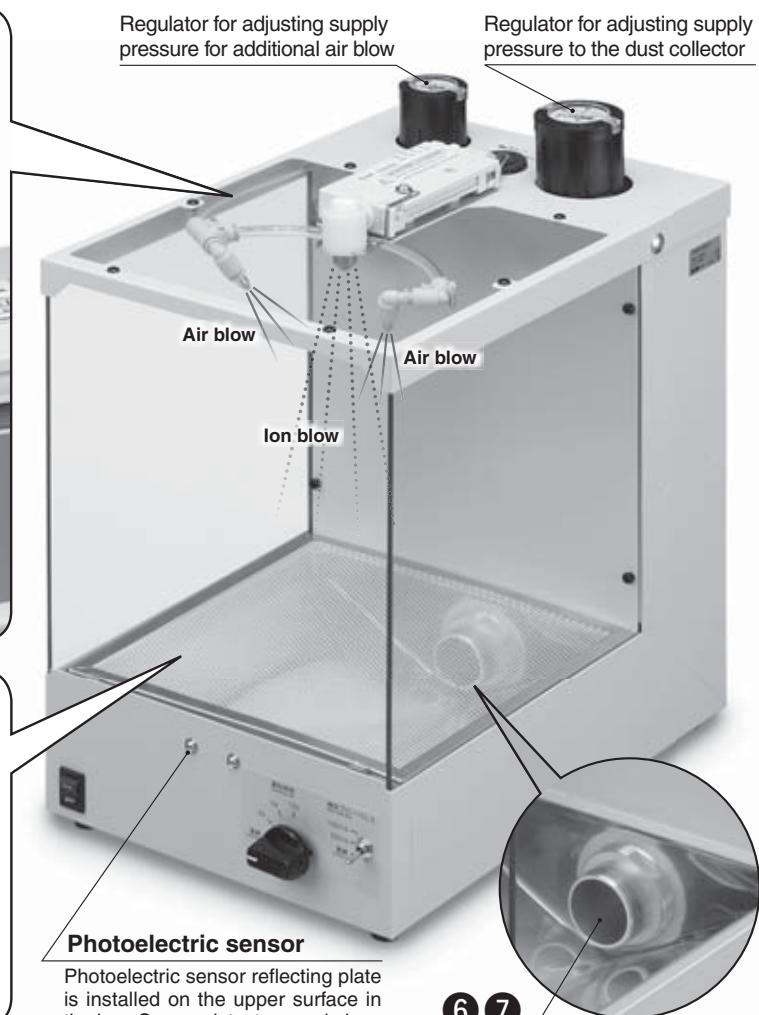

### ④ Secured a large static neutralisation space.

Reduced the dust collector space using a pneumatic dust collector (vacuum flow), to secure the static neutralisation space to the utmost.

[mm]

Model	Size	Static neutralisation space (Width x Depth)
ZVB20	A4	202 x 212
ZVB40	A3	392 x 298

### ① Minimised attenuation of ion

Separate ion blow/air blow structure, thus reducing the attenuation of the ion by an air blow.

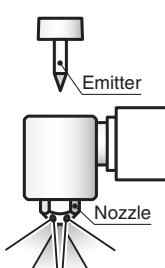

### ② Adoption of nozzle that neutralises static electricity in a wide range.

Adopted a diffusion type nozzle for the ionizer, so that ionised air reaches all corners of the box with this, an extensive range of large workpieces is supported.

### ③ Easy maintenance of emitter

Since the emitter can be removed easily, replacement and cleaning can also be performed easily.

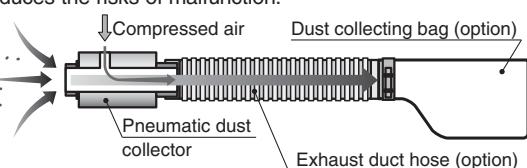

### ⑤ Nozzle dedicated for the blow without impairing the generation efficiency of the ion

It is equipped with an additional air blow nozzle only for dust removal. Besides the ionised air, the angle and flow rate of the air blow can be adjusted (optional). The pressure can also be adjusted with an additional air blow pressure regulator installed on the back side of the body.

### ⑥ Adoption of maintenance-free pneumatic dust collector.

Since a built-in pneumatic dust collector blows the sucked in dust to the exhaust port by the power of compressed air, dust will not remain inside the dust collector. The maintenance-free dust collector without a drive unit also reduces the risks of malfunction.

### ⑦ Quick dust collection response

The pneumatic dust collector starts collecting dust immediately after the built-in solenoid valve is opened. This reduces the cycle time with a quick response, from the input of an electrical signal to the start of suction.

Static neutralisation

# Desktop Duster Box

## Series ZVB

### How to Order

ZVB **20** - **B** **S** -

**1** Size

20
40

**2** Additional air blow

B	With additional air blow
---	--------------------------

**3** Photoelectric sensor

—	None Note 1)
S	With photoelectric sensor Note 2)

Note 1) It is necessary to connect an external switch to the external input terminal on the back side of the product.

Note 2) This is a regression reflection type photoelectric sensor.

Completely transparent workpieces detection is not available.

**4** Option Note 3)

—	None
D	With 3 m exhaust duct hose (hose band attached)
P	With dust collecting bag (hose band attached)
S	With additional air blow adjustment needle valve

Note 3) When two or more options are specified, indicate them alphabetically.

Note) The Desktop Duster Box comes without AC adapter.

Please order it separately (details below).

### Options (\* The number of sets provided when selected in ④ differs by the size.)/Spare parts

**①** 3 m exhaust duct hose (hose band attached)

Model: ZVB-D3A

\* ZVB20...1 set  
ZVB40...2 sets

1 m exhaust duct hose (hose band attached)

Model: ZVB-D1A

**②** Dust collecting bag

Model: ZVB-P1A

\* ZVB20...1 set  
ZVB40...2 sets

**③** AC adapter

Model: ZVB-AC1EU

**④** Emitter

Model: IZN10-NT-X325

**⑤** Air blow adjustment needle valve

Model: AS2001F-06D-X678

### Specifications

Component	Item	Model	ZVB20	ZVB40		
Ionizer	Type		Nozzle type			
	Number of mounted units	1	2			
	Ion generation method		Corona discharge type			
	Method of applying voltage		High frequency AC type			
	Discharge time		0.3 s (1000 V→100 V)			
	Offset voltage	Within ±10 V (Static neutralisation distance: 100 mm from the nozzle)				
Dust collector	Type	Pneumatic type, Vacuum flow				
	Number of mounted units	1	2			
	Supply pressure range	0.1 to 0.7 MPa				
	Exhaust flow rate	410 to 1580 l/min (ANR)	820 to 3160 l/min (ANR)			
Body	Fluid	Air (Dry air)				
	Operating pressure range	0.2 to 0.8 MPa				
	Power supply voltage	85 to 264 VAC 50 / 60 Hz (when using the exclusive AC adaptor)				
	Operating time setting	Continuous/Timer [2 / 5 / 10 s]				
	Additional air blow setting	Continuous blow/Pulse blow [50 / 100 ms intervals]				
	Operating temperature range	0 to 55 °C Note 1)				
	Air consumption Note 2)	420 l/min (ANR)	800 l/min (ANR)			
	Weight Note 3)	5.1 kg	9.9 kg			

Note 1) No freezing

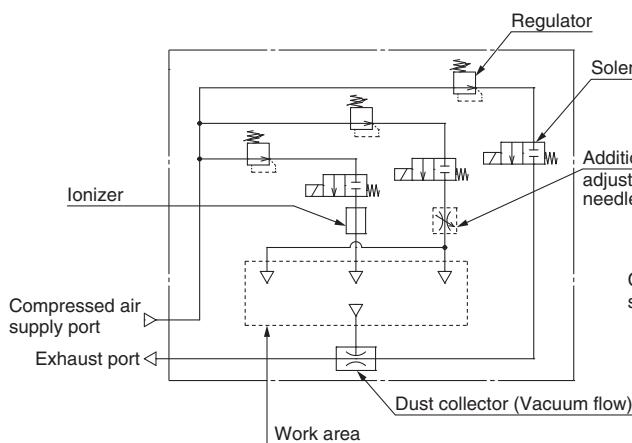

Note 2) When supply pressure to the dust collector is set to 0.3 MPa (ZVB20) / 0.4 MPa (ZVB40) and additional air blow supply pressure to 0.2 MPa. Based on SMC's measuring conditions.

Note 3) Overall weight excluding optional parts

## Air Circuit Diagram

ZVB20

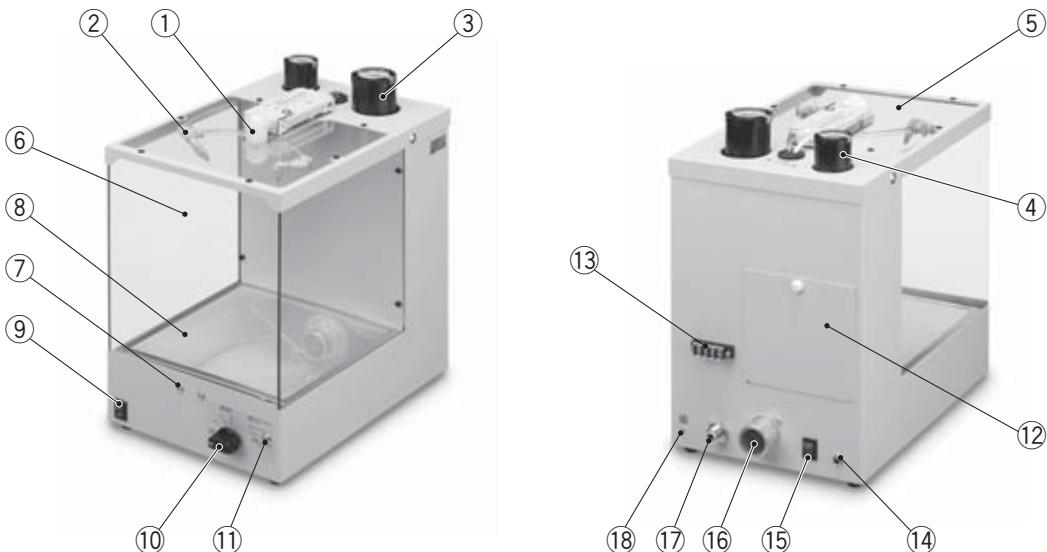

ZVB40

## Construction

(Photo shows the ZVB20.)

## Component Parts\*

No.	Description	Note
1	Ionizer	ZVB20: 1 unit, ZVB40: 2 units, With diffusion nozzle
2	Additional air blow nozzle	ZVB20: 2 pcs., ZVB40: 4 pcs., Nozzle diameter: Ø 1.0
3	Regulator for adjusting supply pressure to the dust collector	With pressure gauge
4	Regulator for adjusting supply pressure for additional air blow	With pressure gauge
5	Top cover assembly	Static electricity restriction grade (PET)
6	Side cover	Static electricity restriction grade (PET)
7	Photoelectric sensor	ZVB20: 1 pc., ZVB40: 2 pcs., Reflection type (built into the body)
8	Mesh	Detachable
9	Power supply switch	
10	Operation time set switch	Continuous / 2 s / 5 s / 10 s

No.	Description	Note
11	Additional air blow pulse operation time set switch	Continuous (no pulse) / 50 ms / 100 ms
12	Cover for valve maintenance	Used when replacing the built-in valve
13	Terminal block	Signal output / External input / COM+ / COM-
14	AC adapter (DC plug) entry	
15	ON/OFF switch for dust collector	
16	Exhaust port of the dust collector	ZVB20: 1 port, ZVB40: 2 ports, Exhaust duct hose connection port(O.D.: Ø 32)
17	Compressed air supply port	ZVB20: Ø 8, ZVB40: Ø 10
18	Grounding screw	

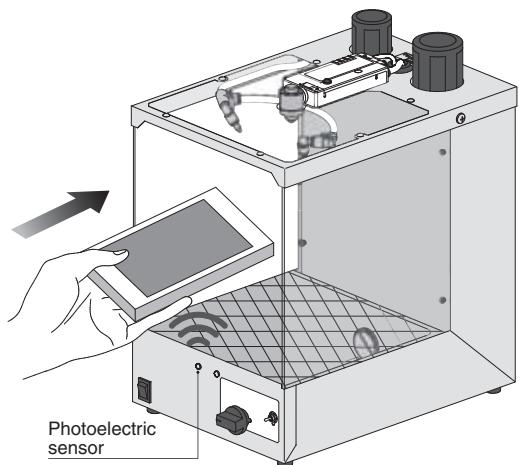

\* Although the components are common to the ZVB20 and ZVB40, the number of attached parts differs. (Refer to the note column.)

## Operation Flow

The following shows the operating sequence during continuous operation and timer operation with the photoelectric sensor.

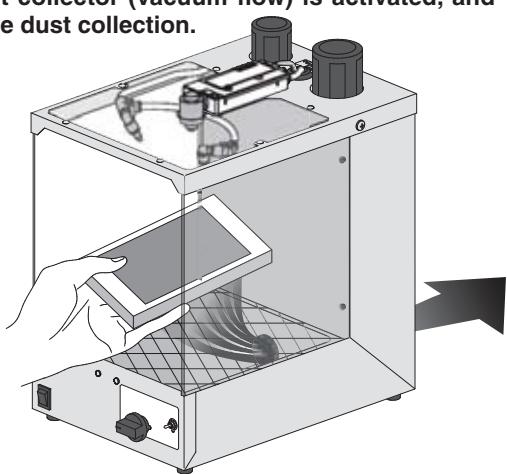

### 1 Main unit operation

The photoelectric sensor detects the workpiece.

### 2 Start of dust collection

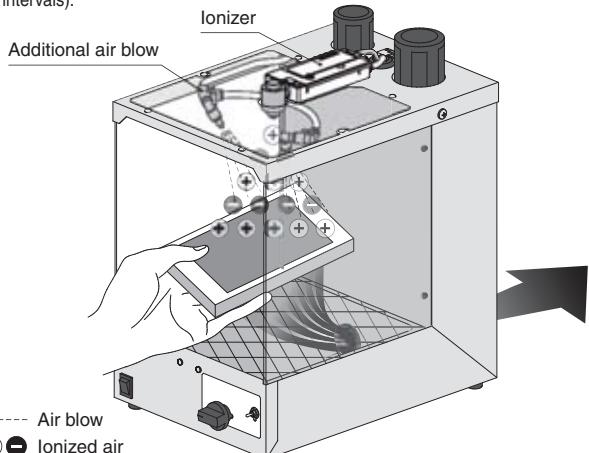

The dust collector (vacuum flow) is activated, and starts the dust collection.

### 3 Start of static neutralisation and dust removal

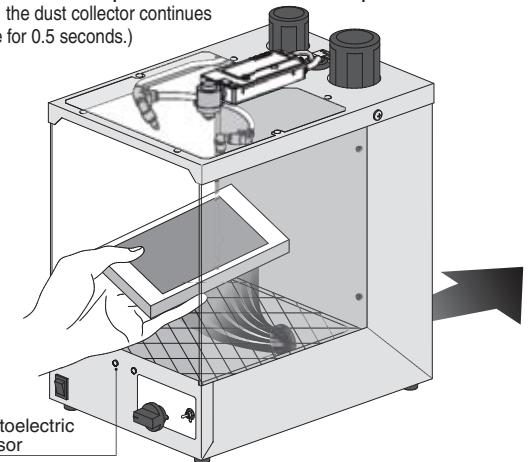

The dust collector (vacuum flow) is activated, and starts the ionizer (static neutralisation) and the additional air blow (dust removal) after 0.5 seconds.

\* The additional air blow can be set to continuous or pulse (50 / 100 ms intervals).

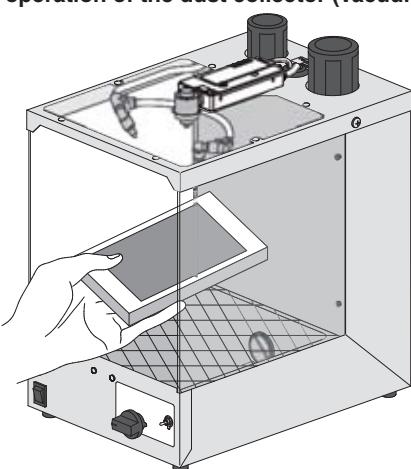

### 4 Stop of static neutralisation and dust removal

The operation of the ionizer (static neutralisation) and the additional air blow (dust removal) stops by the progression of the set time (2 / 5 / 10 seconds), or the OFF detection of the photoelectric sensor after a workpiece is removed. (However, the dust collector continues to operate for 0.5 seconds.)

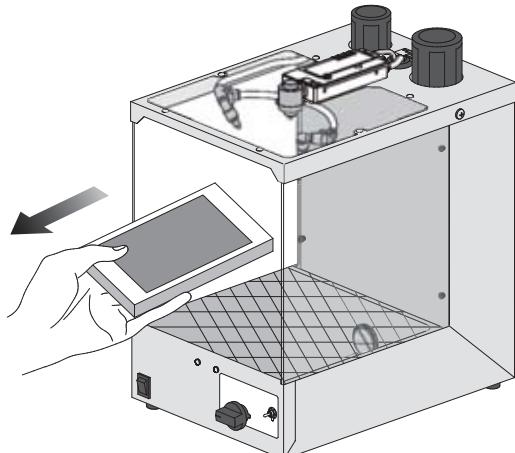

### 5 Stop of dust collection

Stops the operation of the dust collector (vacuum flow).

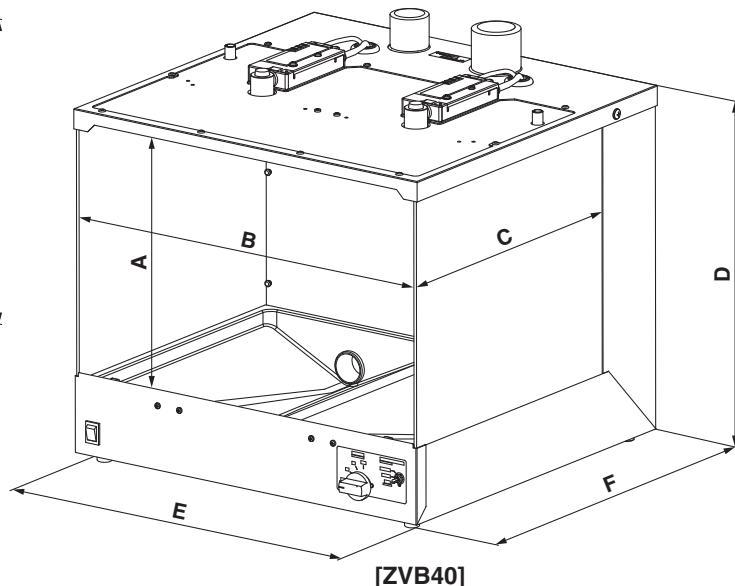

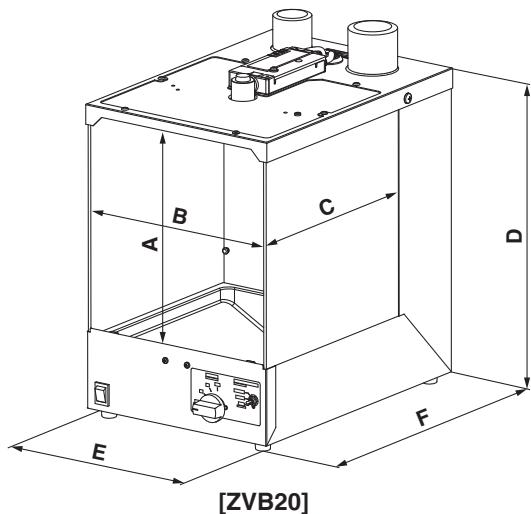

### 6 Remove the workpiece.

# Series ZVB

## Dimensions

Model	A	B	C	D	D' Note 1)	E	F	F' Note 2)
ZVB20	211	202	212	310	351	210	297	341
ZVB40	248	392	298	349	390	400	384	428

Note 1) Dimension D' is the overall height including the knob of the regulator.

Note 2) Dimension F' is the overall depth including the switch lever on the front and the exhaust port on the back.

Refer to the operation manual for detailed dimensions.

# Series ZVB

## Specific Product Precautions

Be sure to read this before handling.

### Installation/Mounting

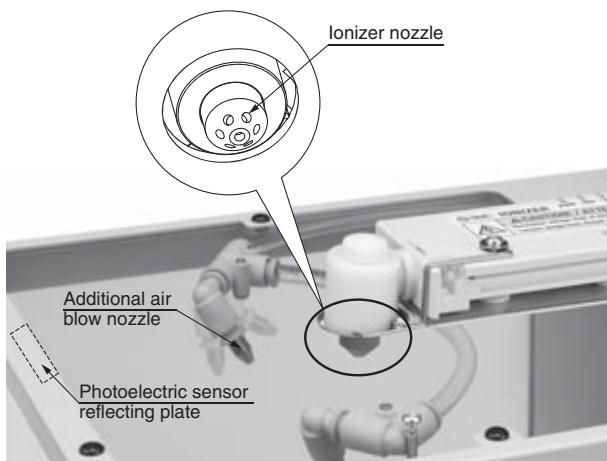

#### ⚠ Warning

##### 1. Avoid using in a place where noise (electromagnetic waves and/or surges) is generated.

It may cause failure or damage to the product. Take measures to prevent noise at source and avoid power and signal lines from coming into close contact.

##### 2. Do not allow foreign matter, workpiece or tool to enter the ionizer nozzle.

There is an emitter inside the nozzle. If the emitter gets in contact with metallic workpieces or tools, electrical shock may cause injury. If emitter is damaged, it may interfere with the specified function and performance, and may also cause operation failure and accident.

(In addition to the ionizer nozzle, the additional air blow nozzle and photoelectric sensor reflecting plate are installed on the upper surface in the box. Avoid these items being in a collision with a workpiece.)

##### 3. When the dust collector is operating, air is discharged vigorously from the exhaust port.

Prevent exhausted air from contacting people or objects. Piping (I.D. 32 mm) or dust collecting bag must be connected to the exhaust port.

### Wiring/Piping

#### ⚠ Warning

##### 1. Power supply required to the product is 24 VDC and 1 A.

When power is supplied to the product without using the exclusive AC adapter, make sure to use a stabilisation power supply and connect wiring to the DC plug that is provided with the product as an accessory.

##### 2. D-class ground connection must be used to the product.

Without grounding, the product will not provide the specified performance.

##### 3. For air piping, use SMC or equivalent tubing of diameter 8 mm (for ZVB20) or 10 mm (for ZVB40). It is strongly recommended to use clean dry air (with a dew point at approximately -20 °C).

##### 4. Air connections should only be made with the pressure supply turned off.

Flush the system before piping to prevent foreign matter from entering inside the product.

### Operating Environment

#### ⚠ Warning

##### 1. Operate in an environment in the specified ambient temperature and fluid temperature ranges (0 to 55 °C).

Avoid sudden temperature changes even within specified temperature range, as it may cause condensation.

##### 2. Do not use this product in an enclosed space. This product utilises the corona discharge phenomenon.

Although the amount is very small, Ozone and NOx are generated. Ozone condensation can increase if used in an enclosed space, which can affect the human body, so ventilation is necessary.

### Maintenance

#### ⚠ Warning

##### 1. Perform maintenance regularly and clean the emitters. (every 2 weeks suggested.).

The maintenance must be performed by an operator who has sufficient knowledge and experience. If the ionizer is used for a long time and there is dust on the emitters, performance of the product will be reduced. When the NDL LED (maintenance signal LED) is ON, the emitter needs to be cleaned. If the emitter gets worn and static neutralisation ability does not recover even after cleaning, replace the emitter. (Emitter part no.: IZN10-NT-X325)

##### 2. Before starting inspection, cleaning or replacing the emitter, or replacing the valves, be sure to turn OFF the power and air supply to the main body to prevent electric shocks or accidents.

### Handling

#### ⚠ Caution

##### 1. Do not drop, hit or apply excessive shock to the product.

Even if the body is not damaged, the internal components may be damaged, leading to a malfunction.
